Problem statement and design basis

1 Project objective

The aim is to design and build a single-seat glider that is light, inexpensive, and safe, stable and predictable in flight. This document states the problem and sets its basis without determining a technical solution.

2 Starting requirements and criteria

Table 1 lists the requirements and criteria from which the design starts.

Table 1. Starting requirements and criteria.

Item	Requirement or criterion
Aircraft type	Single-seat glider.
Empty mass (OEW)	Less than 70 kg, excluding the pilot. Mandatory project limit.
Pilot	Maximum mass 90 kg.
Safety	Safe design, with stable and predictable flight behaviour. Basic trainer.
Budget	Target materials cost 3500 ± 500 €.
Construction time	150 person-hours, as a preliminary target.
Transport	Transportable by road.
Construction	Feasible in a small workspace with simple, accessible means.
Maintenance	Easy to inspect, repair and maintain.
Design philosophy	Simplicity and accessibility. Materials and components available in Spain.
